

Amogh Akshintala

PH.D. STUDENT, DEPT. OF COMPUTER SCIENCE, UNC CHAPEL HILL

☎ +1 (631)-974-3741 | ✉ aakshintala@cs.unc.edu | 🏠 aakshintala.com

Education

University of North Carolina - Chapel Hill

DOCTOR OF PHILOSOPHY

Aug 2016 — Ongoing

Stony Brook University

DOCTOR OF PHILOSOPHY (TRANSFERRED TO UNC)

Jan 2014 — Aug 2016

M.S. IN COMPUTER SCIENCE (AWARDED MAY 2016)

Aug 2014 — Dec 2013

Visvesvaraya Technological University

B.E. IN COMPUTER SCIENCE AND ENGINEERING

2008 — 2012

Publications

Writes Wrought Right, and Other Adventures in File System Optimization.

JUN YUAN, YANG ZHAN, WILLIAM JANNEN, PRASHANT PANDEY, **AMOGH AKSHINTALA**, KANCHAN CHANDNANI, POOJA DEO, ZARDOSHT KASHEFF, LEIF WALSH, MICHAEL A. BENDER, MARTIN FARACH-COLTON, ROB JOHNSON, BRADLEY C. KUSZMAUL, AND DONALD E. PORTER.

ACM Transactions on Storage

Optimizing Every Operation in a Write-optimized File System

Awarded Best Paper

JUN YUAN, YANG ZHAN, WILLIAM JANNEN, PRASHANT PANDEY, **AMOGH AKSHINTALA**, KANCHAN CHANDNANI, POOJA DEO, ZARDOSHT KASHEFF, LEIF WALSH, MICHAEL BENDER, MARTIN FARACH-COLTON, ROB JOHNSON, BRADLEY C. KUSZMAUL, AND DONALD E. PORTER.

Experience — Internships

VMware Research Group

RESEARCH INTERN

Austin, TX.

May 2017 — Aug. 2017

VMware Inc.

MEMBER OF TECHNICAL STAFF - INTERN

Cambridge, MA.

May 2014 — Aug. 2014

Tintri Inc.

MEMBER OF TECHNICAL STAFF - INTERN

Mountain View, CA

May 2013 - Aug. 2013

Experience — Academic

UNC Department of Computer Science

RESEARCH ASSISTANT

Aug 2016 — present

Stony Brook University

RESEARCH ASSISTANT

Jan 2015 — Aug. 2016

Stony Brook University

TEACHING ASSISTANT

Operating Systems (Graduate)

Fall 2014

Projects

TMNT: accelerating data movement among accelerators

Spring '18 - ongoing

- Data movement is the first-order determinant of performance when programming with high-throughput accelerators. When you throw in the additional challenge of co-ordination among multiple accelerators, the problem is compounded because of the synchronous nature of control in the Master-Slave model that such accelerators operate under. We're designing a data movement accelerator as a mechanism to offload management of data placement, and movement between the host and accelerators; to manage co-ordination, and scheduling of computation on accelerators, and to ease the programming burden on the application programmer.

GPGPU Virtualization

Summer '17 - ongoing

- Many methods have been proposed to virtualize general purpose compute on GPUs. However, none of them hit the right spot. We observe that there are actually two separate elements that need to be virtualized when dealing with GPGPUs: device control, and compute. We extend the para-virtual model used by VMware to take advantage of this observation, to investigate our hypothesis that handling these two elements separately is the key to achieving good GPGPU performance.

Instruction Popularity

Summer '16 — ongoing

- Overlapping-ISA multi-core computers have been actively studied in the past decade. However, in most of these studies the data, used to craft the various subsets of the ISA, is collected from a small number of applications, usually popular, and often outdated, benchmarks.
- We statically analyze 9000 C/C++ binaries in the Ubuntu 16.04 repositories to get a higher fidelity understanding of static instruction distribution among applications.

BetrFS (www.betrfs.org)

Spring '14 — Spring '16

- The B^e-tree File System, or BetrFS, is an in-kernel file system that uses B^e-trees to organize on-disk storage. B^e-trees are a form of write-optimized dictionaries, and offer the same asymptotic behavior for sequential I/O and point queries as a B-tree. The advantage of a B^e-tree is that it can also ingest small, random writes 1-2 orders of magnitude faster than B-trees and other standard on-disk data structures. The goal of BetrFS is to realize performance that strictly dominates the performance of current, general-purpose file systems.
- I was the official Benchmark Czar for the project — I did most of the performance testing and engineering on the File System.

Investigating Next Page Prefetcher behaviour

Winter 2014 - Summer 2015

- Significant differences in the impact of prefetching on the performance of an application in a VM and running on the host triggered an investigation of the behaviour of the Next Page Prefetcher, which was recently introduced in Intel CPUs. Although the investigation was inconclusive about the source of the variation, I learnt a lot about caches, prefetching, and profiling tools.

Reduced x86_64 backend for LLVM compiler

Winter 2013 - ongoing

- As a first step towards the exploring the design-space of ISA-homogeneous, Capability-heterogeneous multi-core processors, we are attempting to build a backend for the LLVM Compiler that operates on a configurable subset of x86_64 ISA.
- I mentored 2 M.S. students working on this project.
